

HTTP response status codes

HTTP response status codes indicate whether a specific HTTP request has been successfully completed or not

Range = 100 - 599

1. Informational responses (100 - 199)
2. Successful responses (200 - 299)
3. Redirection messages (300 - 399)
4. Client error responses (400 - 499)
5. Server error responses (500 - 599)

1. Informational response (100 - 199)

1. 100 Continue (Kaam Jaari Rakho)

Socho tumne server ko ek bahut badi file bhejne ki permission maangi. Server ne check kiya ki sab sahi hai aur bola **"100 Continue"**. Iska matlab hai: "Ha bhai, rasta saaf hai, baaki ka data bhej do." Agar client ne pehle hi sab bhej diya hai, toh wo ise ignore kar deta hai.

2. 101 Switching Protocols (Rasta Badalna)

Ye tab aata hai jab browser server se kehta hai, "Bhai, HTTP purana ho gaya, chalo **WebSockets** pe baat karte hain." Agar server taiyar hai, toh wo **101** bhejta hai.

- **Example:** Chat apps mein jab fast connection chahiye hota hai, tab browser protocol switch karne ki request karta hai.

3. 102 Processing (Abhi Kaam Ho Raha Hai)

Ye thoda purana ho gaya hai (Deprecated). Iska use WebDAV mein hota tha. Jab server ko pata chale ki request bahut badi hai aur time lagega, toh wo browser ko bolta hai, "Main busy hoon, timeout mat ho jana, processing chal rahi hai."

4. 103 Early Hints (Pehle se Taiyari)

Ye kaafi smart feature hai. Jab server main response (HTML) prepare kar raha hota hai, wo pehle hi ek **103 Early Hints** bhej deta hai. Isme [Link](#) headers hote hain jo browser ko batate hain:

2. Successful responses

1. 200 OK (Sab Changa Si)

Ye sabse common code hai. Iska matlab hai ki request puri tarah kamyab rahi.

- **GET:** Aapne page maanga, server ne bhej diya.
- **POST:** Aapne data bheja, server ne receive kar liya.

2. 201 Created (Naya Janm)

Ye tab aata hai jab aapki request ki wajah se server par kuch **naya create** hua ho.

- **Example:** Aapne naya Instagram account banaya ya koi naya blog post submit kiya. Server bolega, "Bhai, naya resource ban gaya hai!"

3. 202 Accepted (Arzi Jama Ho Gayi)

Iska matlab hai server ne aapki request le li hai, par abhi tak uspar **action nahi liya**.

- **Analogy:** Jaise sarkari daftar mein file jama ho jati hai, par kaam baad mein hoga. Ye aksar "Batch processing" ya bade tasks ke liye hota hai jisme time lagta hai.

4. 203 Non-Authoritative Information (Third-party Khabar)

Yahan data toh mil raha hai, par wo **origin server** (main source) se nahi aa raha. Shayad kisi backup server ya mirror site se aa raha hai.

5. 204 No Content (Kaam Ho Gaya, Par Dikhane ko Kuch Nahi)

Server ne request puri kar di, lekin use wapas bhejne ke liye koi data (body) nahi chahiye.

- **Example:** Aapne "Save" button dabaya, data save ho gaya, par page refresh karne ki ya naya data dikhane ki zaroorat nahi hai.

6. 205 Reset Content (Saaf Safai)

Ye browser ko bolta hai, "Bhai, kaam ho gaya, ab is form ya document ko **reset** kar do (khaali kar do)."

7. 206 Partial Content (Adha-Adhura Data)

Jab aap koi badi video stream karte ho ya koi file resume karte ho, toh browser kehta hai "Mujhe sirf 10MB se 20MB tak ka part chahiye."
Server jab utna hissa bhejta hai, toh **206** use karta hai.

WebDAV Specific Codes (Thode Advanced)

- **207 Multi-Status:** Jab ek hi request mein bahut saari cheezein ho rahi hon, toh server har ek ka alag status (ek hi response mein) batata hai.
- **208 Already Reported:** Agar wahi cheez pehle hi batayi ja chuki hai, toh baar-baar repeat na karne ke liye ye code use hota hai.

3. Redirections messages

1. 301 Moved Permanently (Ghar Badal Gaya)

Ye tab hota hai jab koi page hamesha ke liye kisi naye address par shift ho jaye.

- **Imp:** Google jaise search engines ko pata chal jata hai ki ab purane link ki jagah naye link ko yaad rakhna hai.

2. 302 Found (Temporary Shift)

Resource abhi kahin aur hai, par ye **temporary** hai. Browser se kaha jata hai, "Abhi ke liye wahan chale jao, par bhavishya mein isi purane link par wapas aana."

3. 303 See Other (Udhar Dekho)

Ye aksar **POST** request ke baad aata hai. Server kehta hai, "Maine tumhara data le liya hai, ab iska result dekhne ke liye is doosre link par **GET** request bhejo."

4. 304 Not Modified (Kuch Nahi Badla)

Ye caching ke liye bohot zaroori hai. Browser puchta hai, "Kya ye image badli hai?" Server kehta hai, "**Nahi, wahi purani wali use kar lo.**" Isse internet data aur time dono bachte hain.

5. 307 Temporary Redirect & 308 Permanent Redirect

Ye 302 aur 301 jaise hi hain, bas ek bada farq hai: **HTTP Method nahi badlega.**

- Agar aapne **POST** kiya tha, toh redirect hone ke baad bhi **POST** hi rahega (301/302 mein kabhi-kabhi browser ise **GET** mein badal dete hain, jo ki galat ho sakta hai).

1. client error response

1. 400 Bad Request (Galat Sawal)

Jab server ko aapki request samajh hi na aaye. Jaise aapne syntax galat likh diya ya request mein koi zaroori cheez miss kar di. "Bhai, kya kehna chah rahe ho? Saaf-saaf bolo."

2. 401 Unauthorized vs. 403 Forbidden (Sabse zyada Confusion)

In dono mein hamesha log confuse hote hain, par farq bada hai:

- **401 Unauthorized:** Iska matlab hai "Tum kaun ho?" (Login nahi kiya). Server ko aapki identity chahiye.
- **403 Forbidden:** Iska matlab hai "Main jaanta hoon tum kaun ho, par tumhein yahan aane ki permission nahi hai." (Identity hai, par access nahi).

3. 404 Not Found (Milega hi nahi)

Ye internet ka sabse mashhoor code hai. Iska matlab hai jo URL aapne dala hai, wo server par exist hi nahi karta.

4. 405 Method Not Allowed (Ye rasta band hai)

Socho ek form hai jo sirf data **POST** karta hai, par aapne use **DELETE** karne ki koshish ki. Server kahega, "Bhai, ye method yahan nahi chalega."

5. 408 Request Timeout (Der kar di)

Server intezaar kar raha tha par aapne data bhejne mein bahut der laga di, toh server ne connection kaat diya.

6. 409 Conflict (Takrav)

Ye tab hota hai jab aapka data server ke current data se bhid raha ho. Jaise kisi ne pehle hi wo username le liya jo aap register karne ki koshish kar rahe ho.

7. 410 Gone (Hamesha ke liye khatam)

Ye 404 jaisa hi hai, par thoda 'sad' hai. Iska matlab hai resource pehle yahan tha, par ab hamesha ke liye delete ho gaya hai aur koi naya address bhi nahi hai.

413 Content Too Large The request body is larger than limits defined by server. The server might close the connection or return a Retry-After header field.

415 Unsupported Media Type The media format of the requested data is not supported by the server, so the server is rejecting the request.

8. 429 Too Many Requests (Control, Bhai!)

Jab aap ek hi minute mein 1000 requests bhej dete ho, toh server bolta hai, "Bas karo! Thoda saans lo (Rate Limiting)."

1. server error response

1. 500 Internal Server Error (Server ki Shanti Bhang)

Ye sabse "Generic" error hai. Iska matlab hai server ke andar kuch aisi gadbad hui hai jo use khud samajh nahi aa rahi. Jaise code mein koi bug aa gaya ya database crash ho gaya. Server bas itna keh pata hai: "Bhai, andar kuch phat gaya hai, mujhe nahi pata kya!"

2. 501 Not Implemented (Mujhe nahi aata)

Jab client koi aisa method use kare jo server ko pata hi nahi ki kaise handle karna hai.

- **Note:** Har server ko `GET` aur `HEAD` toh aana hi chahiye, par agar aapne kuch bohot hi ajeeb maang liya jo server ne implement hi nahi kiya, toh wo **501** de dega.

3. 502 Bad Gateway (Piche se galat jawaab)

Aksar bade systems mein ek main server (Gateway/Proxy) hota hai jo piche wale (Upstream) server se data laata hai. Agar piche wale server ne kachra ya galat jawaab bheja, toh main server aapko **502** dikhayega.

4. 503 Service Unavailable (Dukaan abhi band hai)

Ye tab aata hai jab server temporary taur par kaam nahi kar raha.

- **Wajah:** Ya toh maintenance chal rahi hai, ya server par itna load hai ki wo aur requests nahi le sakta. Aksar iske saath ek `Retry-After` header aata hai jo batata hai ki "10 minute baad try karna."

5. 504 Gateway Timeout (Piche wala so gaya)

Ye **502** jaisa hi hai, par farq ye hai ki piche wale server ne jawaab hi nahi diya. Gateway intezaar karte-karte thak gaya aur bola, "Bhai, piche se koi reply hi nahi aa raha, main ja raha hoon."

Advanced aur Rare Server Errors

- **507 Insufficient Storage (Jagah nahi hai):** Server ki hard drive bhar gayi hai, wo naya data save nahi kar sakta. (Zyada tar WebDAV mein hota hai).
- **508 Loop Detected:** Server ko samajh aa gaya ki request ek gol-gol ghoomne wale loop mein phans gayi hai, isliye wo use khatam kar

deta hai.

- **511 Network Authentication Required:** Ye aksar tab aata hai jab aap kisi Hotel ya Airport ka Wi-Fi use karte ho aur aapko pehle unke login page par sign-in karna padta hai internet chalane ke liye.
